

# Minor in MIS

Price College of Business | MIS Division

## Better IT Skills = Job Opportunities

A recent study by the OECD showed that greater IT proficiency correlates with better job prospects in economically advanced countries like the US (source: worldbank.org).

## What Recruiters Want

An MIS Minor will help you stand out to recruiters, who are increasingly seeking employees comfortable with data and analytics and can interact with the IT function.

## The Right Tools

The newly reconfigured MIS minor was specifically designed to provide business majors the tools they need to land a job in a data-centric environment. And, with the advent of big data, almost *all* business environments are now data-centric.

## Information drives business. The MIS Minor gets you on the road.

The Management Information Systems (MIS) Minor provides business students the skills and experiences they need to succeed in an ever more information-centric business environment. As data becomes ever more central to decision-making, more and better opportunities are becoming available across the organization for those with the right backgrounds and knowledge.

MIS courses focus on finding innovative solutions to challenging organizational problems. Not only is this fun and engaging, but it also prepares you to solve real-world work problems you're likely to face in your business career.

### Required Courses

After completing MIS 2113, take these three courses:

#### MIS 3213

##### Business Data Analysis

Recruiters are asking for students with better spreadsheet skills. Learn advanced Excel techniques and business-critical data analysis approaches and be ready for the internship and day one of your new job.

#### MIS 3353

##### Database Management

Want to make good business decisions? You need good data. Learn first-hand how to model data effectively and design and solve real-world business problems by building a production database.

#### MIS 3383

##### Electronic Business

Tackle SAP hands-on. Through a series of business games and simulations, learn how to maximize company value and efficiency by interacting with the world's gold-standard ERP system.

And take one of these elective courses:

#### MIS 3013

##### Intro to Programming

Learn the basics of coding; particularly useful for understanding IT challenges.

#### MIS 3363

##### Infrastructure and Cyber Security

IT systems are under constant threat. Learn why and how to protect them.

#### MIS 4433

##### Project Management

Keys to effective IT project management; useful for all types of projects.
