Put on your pink and blue glasses and join us as we see how women’s bodies and minds have been objects of inquiry from the scientific revolution to the present, what paths women have taken in entering the stem professions, & why it wasn’t until 1973 that women could sit on juries in all 50 states.

We’ll take on such topics as the gendered aspects of math education & sex education, of operating vacuum cleaners and lawnmowers, of positioning bodies to do downward facing dogs and bench-presses, and why nothing says lovin’ like something from the oven but no one wants to throw like a girl.
